

Janet Forbes – Hartpury University

Janet recently completed a Master's in Applied Equine Science (subsidised by the World Breeding Federation for Sports Horses (WBFSH)), at Hartpury University.

Her research, using a multi-method approach which combined stakeholder input together with a systematic literature review, allowed her to develop a number of evidence-based recommendations to enhance the welfare of sports horses. These recommendations identified welfare priorities in areas such as conception techniques and breeding horse management. She is hoping to further develop her research and to continue her contribution to horse welfare, especially focusing upon sports horses. Janet is also a Project Manager based in Scotland, currently overseeing a large, collaborative project between Heriot-Watt University and the University of Edinburgh.
